

AAL and Kongsberg Digital team up at the NZDF Simulation Symposium

14 September 2017

AAL and Kongsberg Digital joined forces at this week's NZDF Simulation Symposium in Wellington to share information on the latest industry developments in the area of Disruptive Technologies and showcase the capabilities and potential of using Augmented Reality, Virtual Reality, and emerging mixed realities.

Kongsberg's world class K-Sim® Engine simulators are at the forefront of training technology, and as a major world-wide supplier of ship automation and control systems, has a detailed knowledge of the systems and processes onboard and a thorough understanding of the industry's training needs.

Also presented was Kongsberg's digital platform, *kognifai*™

Kognifai is a digital ecosystem – a complex, interconnected network of organisations, applications, and assets. It supports collaboration and knowledge-sharing between all organisations that are part of it, enabling them to interact at a new level to provide new reach and business value.

Most companies already rely heavily on digital technology or have at the very least started digitalising their business. This digital transformation is the first necessary step towards a new business model based on digitalisation and innovation which will foster new revenue possibilities.

A digital ecosystem is such a business model. It requires a vast amount of interconnected technology resources in a highly dynamic environment, but digitalisation makes it quicker and easier to implement than ever before.
